Ankaferd BloodStopper

A unique, plant-based haemostatic agent that has been used for over a decade in Turkey and other countries. It is derived from a combination of five different medicinal plants and stops bleeding in dental procedures, surgery and traumatic injuries.

It works by forming a protein network that adheres to the wound site and creates a barrier to stop bleeding. Unlike traditional haemostatic agents, it does not rely on clotting factors or platelets, so it can be used on patients with clotting disorders.

Under 1 second
to haemostasis on external wounds

3 to 5 seconds
on surgical wounds

No cold chain
no special storage conditions

100% vegetal
five plant extracts, no alcohol

Figures and properties as stated by the manufacturer, Ankaferd (Istanbul, founded 2005).
